Innovative Food Science and Emerging Technologies (2019) The values cover new and novel technologies in food science, including procedures, characteristic, processing, engineering, properties, and reactions. The values consider basic quality, chemical, and microbiological interactions with relevant environmental factors, and new food materials or products. The book also includes a chapter on the future of food science and technology, covering emerging technologies such as bioengineering, nanotechnology, and robotic technologies. This volume is a valuable resource for researchers, practitioners, and students in the field of food science and technology.

Innovative Food Processing Technologies (2020) This book provides a comprehensive overview of the latest developments in food processing technologies, including novel processing methods and emerging technologies. It covers topics such as green food processing, nanotechnology, and biotechnology, and includes contributions from leading experts in the field. The book is a valuable resource for researchers, practitioners, and students in the field of food science and technology.

Innovative Food Packaging Technologies (2019) This book provides a comprehensive overview of the latest developments in food packaging technologies, including novel packaging materials and emerging technologies. It covers topics such as biodegradable and bio-based packaging, smart and sensorial packaging, and emerging technologies such as 3D printing and digital printing. The book is a valuable resource for researchers, practitioners, and students in the field of food science and technology.

Innovative Food Resources and Sustainable Agriculture (2019) This book provides an overview of the latest developments in food resources and sustainable agriculture, including the use of renewable resources and sustainable farming practices. It covers topics such as organic and sustainable agriculture, crop and livestock production, and food supply chain management. The book is a valuable resource for researchers, practitioners, and students in the field of food science and technology.
